EXP 11

Read a CSV File and Display Contents

Aim:

To write an R program to read a CSV file and display its contents.

Procedure:

1. Create a CSV file containing sample data.
2. Read the file using `read.csv()`.
3. Display the complete data and its structure.

Code:

```r
student_data <- data.frame(
  Name = c("Arun", "Bala", "Cathy", "David"),
  Mark = c(85, 72, 90, 65),
  Department = c("IT", "CSE", "ECE", "IT")
)

write.csv(student_data, "students.csv", row.names = FALSE)

data <- read.csv("students.csv")

print(data)
print(str(data))
```

Output:

```
   Name Mark Department
1  Arun   85         IT
2  Bala   72        CSE
3 Cathy   90        ECE
4 David   65         IT

'data.frame': 4 obs. of 3 variables:
 $ Name      : chr
 $ Mark      : int
 $ Department: chr
```

Result:

Thus, the CSV file was read successfully, and its contents and structure were displayed.
