EXP 13

Combine Multiple Arrays Row-wise

Aim:

To write an R program to combine multiple arrays row-wise.

Procedure:

1. Create two matrices with the same number of columns.
2. Combine the matrices using `rbind()`.
3. Display the resulting matrix.

Code:

```r
array1 <- matrix(1:6, nrow = 2, ncol = 3, byrow = TRUE)

array2 <- matrix(7:12, nrow = 2, ncol = 3, byrow = TRUE)

print("First Array")
print(array1)

print("Second Array")
print(array2)

combined_array <- rbind(array1, array2)

print("Combined Array")
print(combined_array)
```

OUTPUT:

```
[1] "First Array"
     [,1] [,2] [,3]
[1,]    1    2    3
[2,]    4    5    6
[1] "Second Array"
     [,1] [,2] [,3]
[1,]    7    8    9
[2,]   10   11   12
[1] "Combined Array"
     [,1] [,2] [,3]
[1,]    1    2    3
[2,]    4    5    6
[3,]    7    8    9
[4,]   10   11   12
```

RESULT:

Thus, the two arrays were successfully combined row-wise using `rbind()`.
